

FREE-STANDING SHIELD ASSEMBLY

Free-standing shield used to protect the area around a milling machine from flying chips.

These shields can be used to protect the area between machines, the backside of machines, along aisles, etc.

These free-standing adjustable shield assemblies are available in a wide range of sizes. They are constructed of $\frac{3}{16}$ "-thick polycarbonate material surrounded by aluminum framing. The shield can easily be adjusted up or down on the stands. The stands are constructed of 2"-square extruded aluminum. Each base includes four holes for permanent mounting to the floor. Four standard sizes are available. Special size shield assemblies are available upon request.
