

TABLE SAW SHIELD ASSEMBLY

This table saw shield is designed to enclose the portion of the saw above the table and enclose the portion of the saw above the material being cut. It is also designed so that the shield will automatically adjust itself to the thickness of and remain in contact with the material being cut—OSHA 1910.213 (c)(1).

This table saw shield assembly consists of durable clear $\frac{3}{16}$ "-thick polycarbonate, a spreader, and anti-kickback pawls—OSHA 1910.213 (c)(2)(3). An extruded aluminum arm and steel mounting brackets support the assembly. The mounting brackets have slotted holes that provide adjustable mounting heights.

OSHA 1910.213 (a)(10) also recommends that each power-driven woodworking machine be provided with a disconnect switch that can be locked in the off position. See pages 63-69 for disconnect choices.
